

OS	AWS instance type(*)	Connection(**)	Memory usage(by free -m)	Memory usage (by emqtt Dashboard)
Ubuntu 16.04	t2.medium with emqtt custom build, w/ devops config	~51,000		
	t2.large with emqtt custom build, w/ devops config	~88,000		
	c3.large with Downloaded emqtt binary, w/ devops confi	~150,000	2.5G	1.7G
	m4.2xlarge	~110,000(***)		
CentOS				
	c3.2xlarge w/ devops config	~130,000	2.8G	1.8G
	c3.large w/ devops config	~126,000	2.7G	1.5G
*) Refer to https://aws.amazon.com/ec2/instance-types/				
**) client were created by using emqtd_benchmark tool, launched from a group of AWS instances(t2.large) as test clients. <code>./emqtt_bench_sub -c 32000 -i 10 -t bench%i -h my.broker.com</code>				
***) Tested and recorded previously, but not reaching its limit. Cannot change to instance type easily, failed at instance status checking always.
